

Question # 01:-

Convert the following numbers

a) 100101011101 to decimal.

$$= (1 \times 2^{11}) + (0 \times 2^{10}) + (0 \times 2^9) + (1 \times 2^8) + (0 \times 2^7) + (1 \times 2^6) + (0 \times 2^5) + (1 \times 2^4) + (1 \times 2^3) + (1 \times 2^2) + (0 \times 2^1) + (1 \times 2^0)$$

$$= 2048 + 256 + 64 + 16 + 8 + 4 + 1$$

$$= \boxed{2397D} \text{ Ans}$$

b) FAE2Ch to decimal.

$$= (15 \times 16^4) + (10 \times 16^3) + (14 \times 16^2) + (2 \times 16^1) + (12 \times 16^0)$$

$$\therefore F = 15$$

$$A = 10$$

$$E = 14$$

$$C = 12$$

$$= 983040 + 40960 + 3584 + 32 + 12$$

$$= \boxed{1027628D} \text{ Ans}$$

c) 6120 to hex

Question # 03:-

do the following binary and hex subtractions by two's complement addition.

a) ~~100~~ 10110100 - 10010111.

First we will take the one's complement of the second number (10010111).

1 0 0 1 0 1 1 1

0 1 1 0 1 0 0 0 → one's complement

In order to get the two's complement simply add 1 in one's complement.

0 1 1 0 1 0 0 0 b
+ 1 b

0 1 1 0 1 0 0 1 → two's complement

Now add first number (10110100) and two's complement of second number (01101001).

1 1
1 1 0 1 1 0 1 0 0 b
+ 0 1 1 0 1 0 0 1 b
1 0 0 0 1 1 1 0 1 b.

As the answer is in 9 bit we will simply neglect the most significant Bit.

00011101b Ans

$$b) 10001011 - 11110111 \quad (3)$$

one's complement of 11110111

$$= 00001000 \rightarrow \text{one's complement}$$

Add 1

$$= 00001000b$$

$$+ 1b$$

$$00001001b \rightarrow \text{two's complement}$$

Add First number and two's complement of second number.

$$10001011b$$

$$+ 00001001b$$

$$10010100b$$

As there is no carry over the most significant bit we will take the two's complement of the answer and put negative sign.

First take one's complement of $10010100b$.

$$= 01100100$$

now add 1 to get two's complement.

$$01100100$$

$$+ 1$$

$$01100101$$

$$= \boxed{-01100101} \text{ Ans}$$

c) FEOFh - 12ABh.

convert these numbers into binary.

1 2 A B
 $\downarrow \quad \downarrow \quad \downarrow \quad \downarrow$
 0001 0010 1010 1011

Take one's complement of 12AB.

0001001010101011 b

1110110101010100 b.

\downarrow
one's complement

For two's complement add 1.

1 1 1 0 1 1 0 1 0 1 0 1 0 1 0 0 . b.
 +
 1 1 1 0 1 1 0 1 0 1 0 1 0 1 0 1 b

\downarrow
two's complement

Now add FEOFh and two's complement of 12ABh

1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1
 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 b

As there is no carry over the most significant bit, we

will take the answer and take its two complement

0 1 1 0 0 1 1 0 1 1 0 1 0 0 1 0

Take one's complement first.

1 0 0 1 1 0 0 1 0 0 1 0 1 1 0 1

Now add 1 to take two's complement.
